Introduction:

A Field-Programmable Gate Array (FPGA) is a type of Complex Programming Logic Device (CPLD) that consists of transistors and input/output ports that can be programmed. The first step in designing a digital device such as a graphic accelerator or video enhancer is to create a prototype of the design on the FPGA and tested. Once the final design is approved, it is sent to be manufactured as an Application Specific Integrated Circuit (ASIC) chip. Any digital design can be coded in Hardware Description Language (HDL) such as Verilog and VHDL or drawn using a schematic file and synthesized and used to configure the FPGA to function as the digital device.

In this tutorial, we will learn how to design a hardware block using schematic and download it onto an FPGA. We will be using the Quartus II software and the Altera DE2 Development Board as shown in Fig. 1.

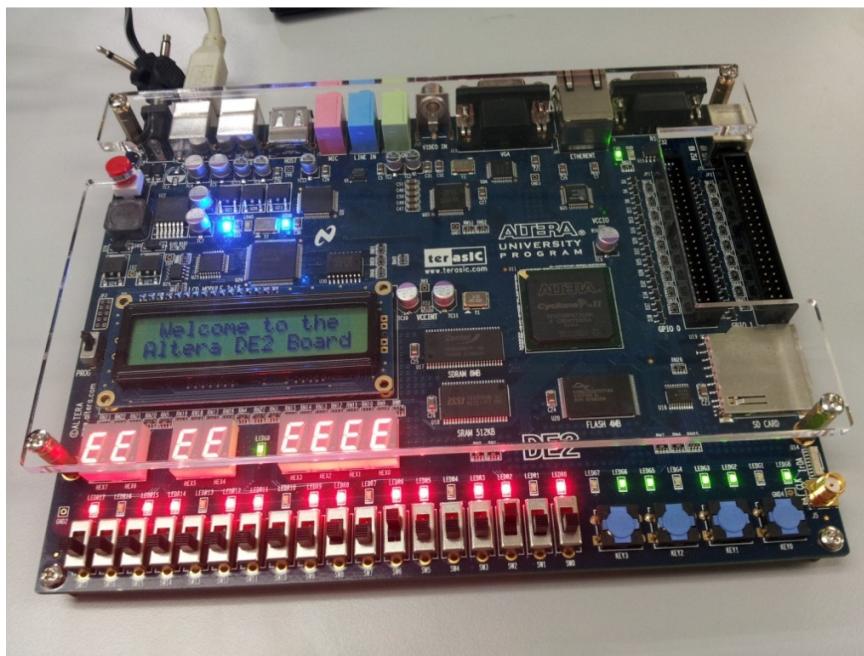

Fig. 1: Altera DE2 Development Board

As an example, we will design a simple decimal counter that counts from 0 to 9. This counter needs two inputs called ‘Enable’ and ‘Count’ and shows the count values as output on LEDs as well as a 7-segment display unit on the FPGA board. Fig. 2 shows the functional block diagram of the counter circuit.

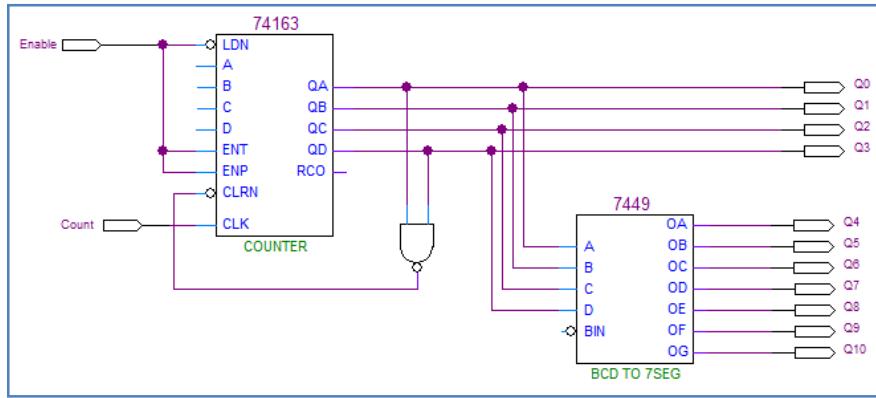

Fig. 2: Functional Block Diagram of a Decimal Counter

In a common digital circuit the input port ‘Enable’ is connected to Vcc and ‘Count’ is connected to a clock signal generator such as the 555 timer chip. However, in this initial design, we connect both input ports to switches on the FPGA board so that we can control the circuit manually. Output ports Q0 – Q3 will be connected to LEDs to display the count value in binary whereas output ports Q4 – Q10 will be connected to a 7-segment display on the FPGA board to display count value in decimal number.

1. Open the Quartus II Design software. Create a new project by choosing File > New Project Wizard and then click ‘Next’. Click on the Browse button to select the ‘working directory’. Create a new folder (preferably in C: or in C:/altera folder) and name it ‘Tuto’. Click ‘Select Folder’ and then select a name for your project (such as ‘Lab 01’ as shown in Fig. 3).

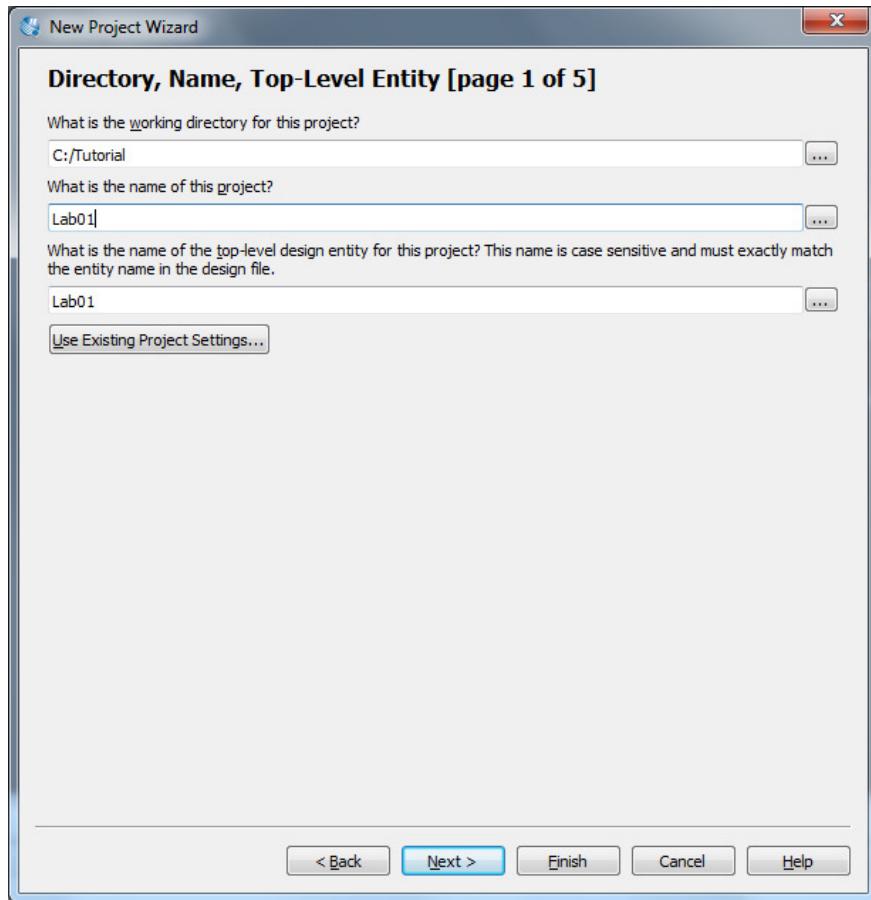

Fig. 3: ‘New Project Wizard’ window

Hint:

- Make sure the project directory does not have any blank spaces (such as ‘C:/Documents and Settings/User/Desktop/My First Tutorial’). This would cause Compilation Error.
- Create a new folder for each project because the Quartus software will generate many files when you compile your project and do not re-use same folder for other Quartus projects.
- The name of your project (‘Lab01’) also must not have any blank spaces in it and your top-level module must have the same name (save your Verilog code as ‘Lab01.v’). Quartus is case-sensitive so use same case for both project name and Verilog file name.

2. Click ‘Next’ and ‘Next’ again to reach the ‘Family and Device Settings’ page and select the following settings. (See Fig. 4) This is the device specification for the Altera DE2 Development Kit that we will use in this lab.

Family:	Cyclone II
Package:	FBGA
Pin Count:	672
Speed Grade:	6

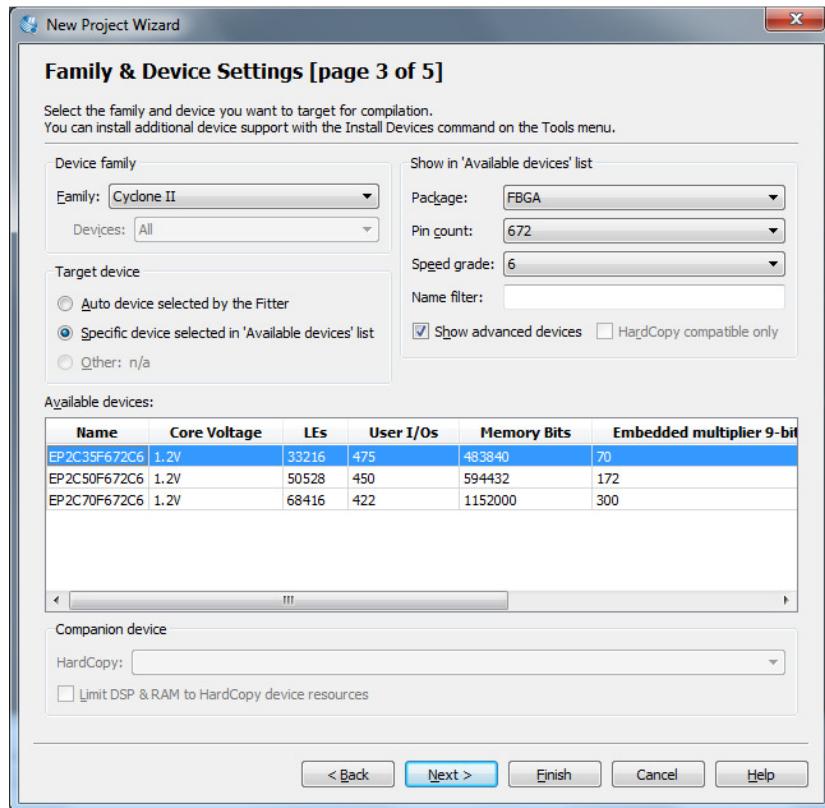

Fig. 4: ‘Family & Device Settings’

3. Click ‘Next’ then ‘Next’ then ‘Finish’.
4. Click File > New > Block Diagram/Schematic File (Fig. 5).

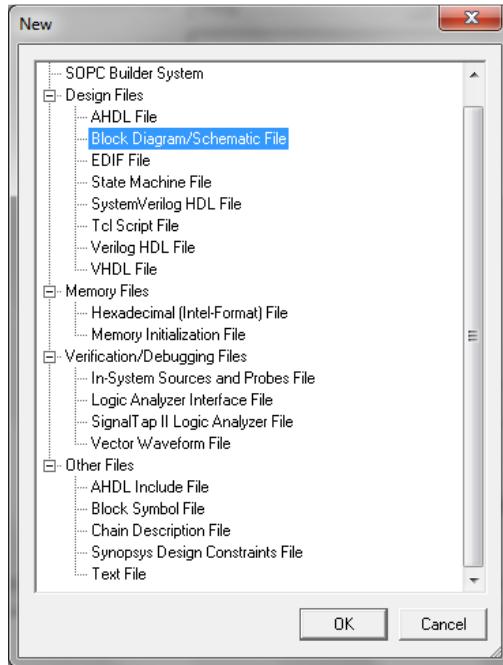

Fig. 5: New Block Diagram/Schematic File

5. Select components to be added to the schematic file as shown in Fig. 6. Components can be added using one of the following method:
 - Double click anywhere on the schematic file
 - Click Edit >> Insert Symbol
 - Click on the () icon in the side-menu bar

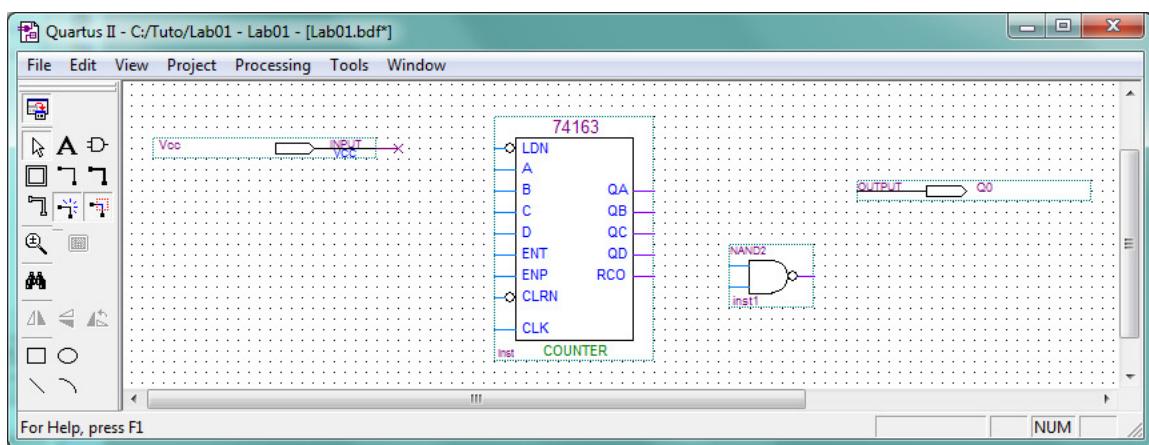

Fig. 6: Adding components to the schematic file

6. Draw the schematic design of a mod-9 counter module as shown in Fig. 7. This counter counts from 0 to 9 and resets to 0.

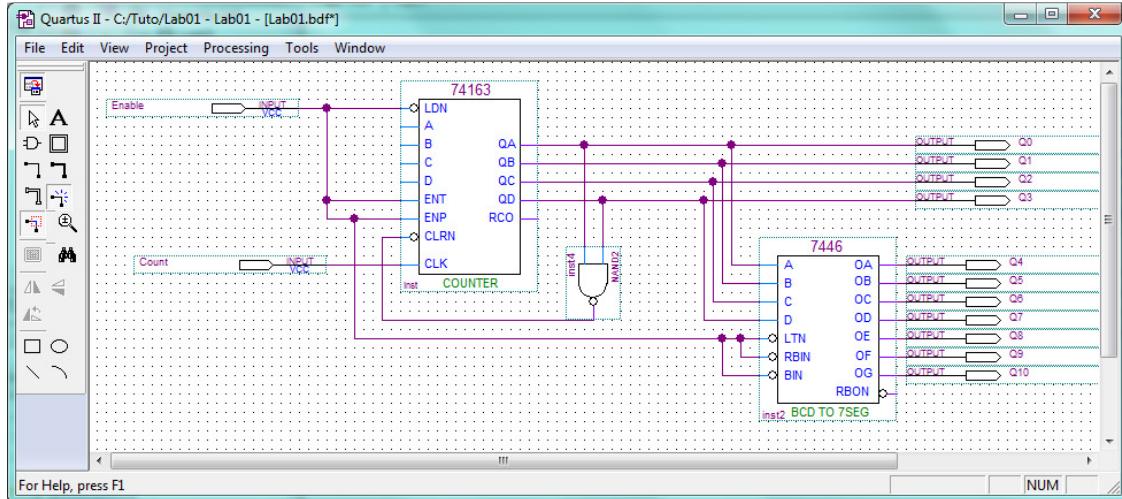

Fig. 7: Schematic File design of a Decimal Counter

7. Once the schematic file is designed, synthesize the circuit:

- Click Processing >> Start Compilation
- Press Ctrl + L or
- Click the compilation icon (▶)

To confirm that the schematic design is connected correctly, click Tools >> Netlist Viewer >> RTL Viewer and confirm that your RTL design is same as shown in Fig. 8.

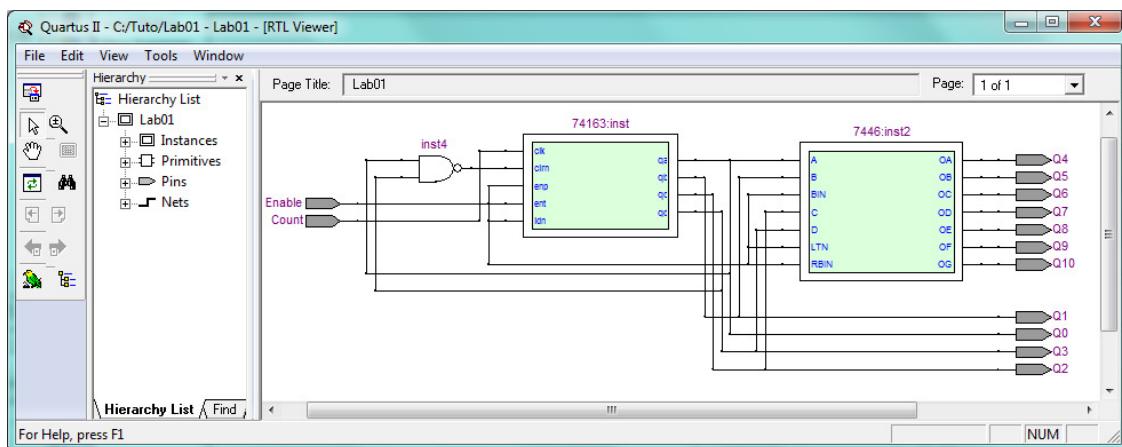

Fig. 8: RTL Netlist of Decimal Counter

8. Next, click File >> New >> Vector Waveform File and right-click on the input/output port column. Click on the 'Node Finder' and click 'List All'. Select the input and output ports and

add them to the waveform file, click ‘Ok’. Provide suitable input values for ‘Enable’ and ‘Count’ input ports as shown in Fig. 9. Perform the Timing Simulation by clicking the () icon.

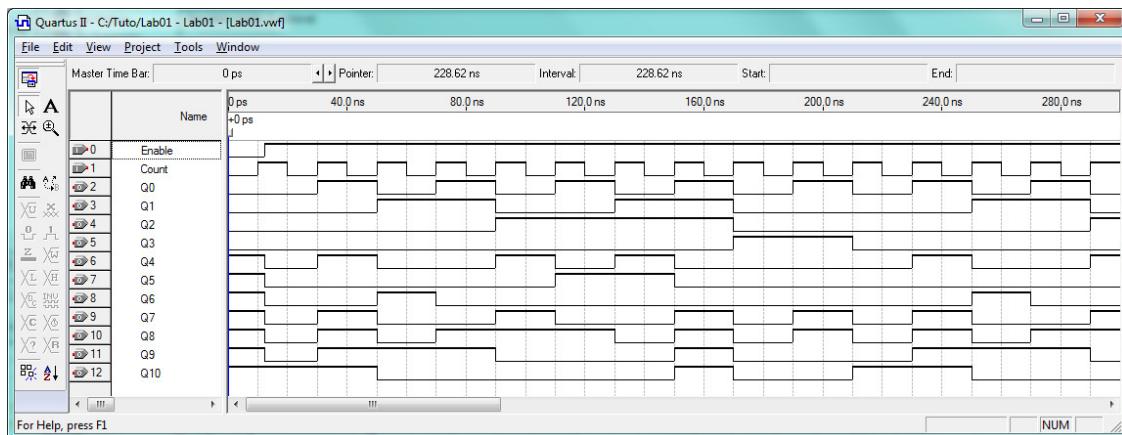

Fig. 9: Waveform Simulation

- The next step is to download the design to the DE2 FPGA board. The Enable input port will be connected to a switch and the Count input port will be connected to a push button on the DE2 FPGA board as shown in Fig. 8. To do that a few configurations must be done.

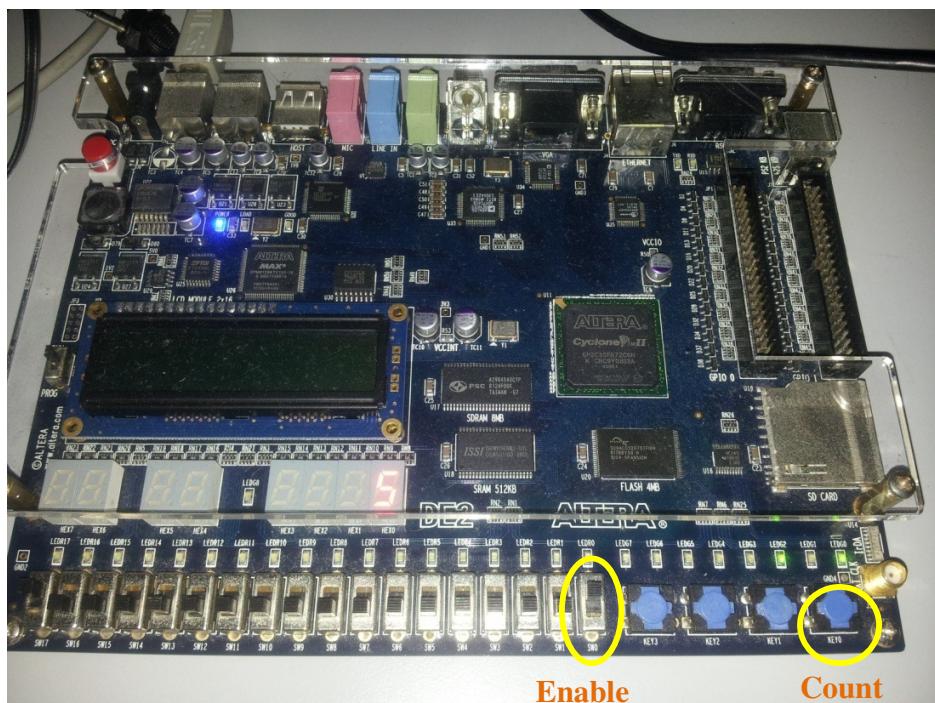

Fig. 8: Altera DE2 Development Board

10. In the Quartus II main window, click on Assignments > Device. Click the ‘Device and Pins Options...’ button. In the ‘Category’ window, click on the ‘Unused Pins’ and change settings for ‘Reserve all unused pins’ to ‘As input tri-stated’ (See Fig. 9).

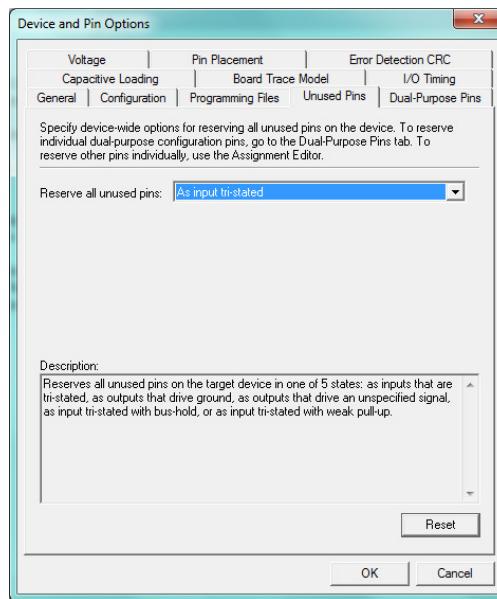

Fig. 9: Settings for Unused Pins

11. Next, click on Assignments > Pin Planner (See Fig. 10). If the pin list at the bottom of the window is not visible, click View > All Pins List.

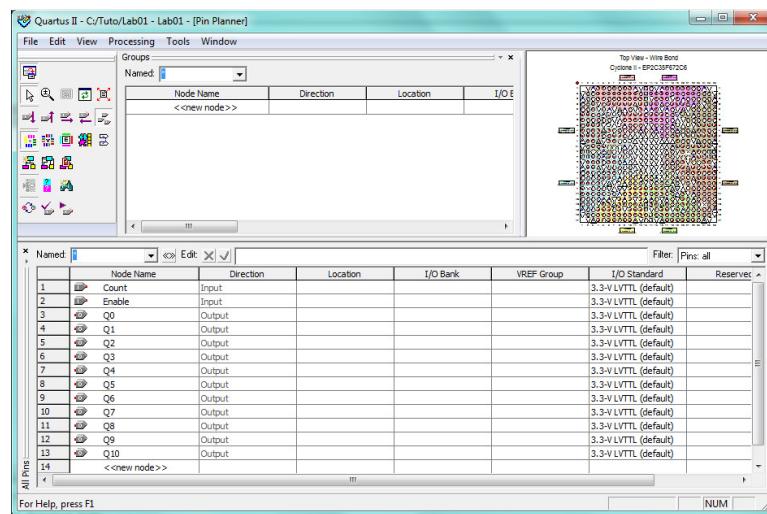

Fig. 10: Pin Planner

12. Change the Pin Location for each input and output port as shown in Fig. 11. Click on the Location cell of each port and type the appropriate pin name.

	Node Name	Direction	Location	I/O Bank
1	Count	Input	PIN_G26	5
2	Enable	Input	PIN_N25	5
3	Q0	Output	PIN_AE22	7
4	Q1	Output	PIN_AF22	7
5	Q2	Output	PIN_W19	7
6	Q3	Output	PIN_V18	7
7	Q4	Output	PIN_AF10	8
8	Q5	Output	PIN_AB12	8
9	Q6	Output	PIN_AC12	8
10	Q7	Output	PIN_AD11	8
11	Q8	Output	PIN_AE11	8
12	Q9	Output	PIN_V14	8
13	Q10	Output	PIN_V13	8
14	<<new node>>			

Fig. 11: Settings for Pins

13. Connect the Altera DE2 Development Kit to the computer using the USB Blaster cable and switch it on. Initially all the 7-segment displays and LEDs will light up as depicted in Fig. 1.

14. Compile the Quartus project called Lab01 and click on the programmer icon () or click Tools > Programmer from the top menu bar. When the programmer window opens, make sure that the USB-Blaster is detected or click on Hardware Setup to select it. If there is any previous file in the program window, select it and click ‘Delete’. Click on ‘Add File...’ button and select *Lab01.sof*. Make sure the ‘Program/Configure’ option is checked (✓) and click the ‘Start’ button.

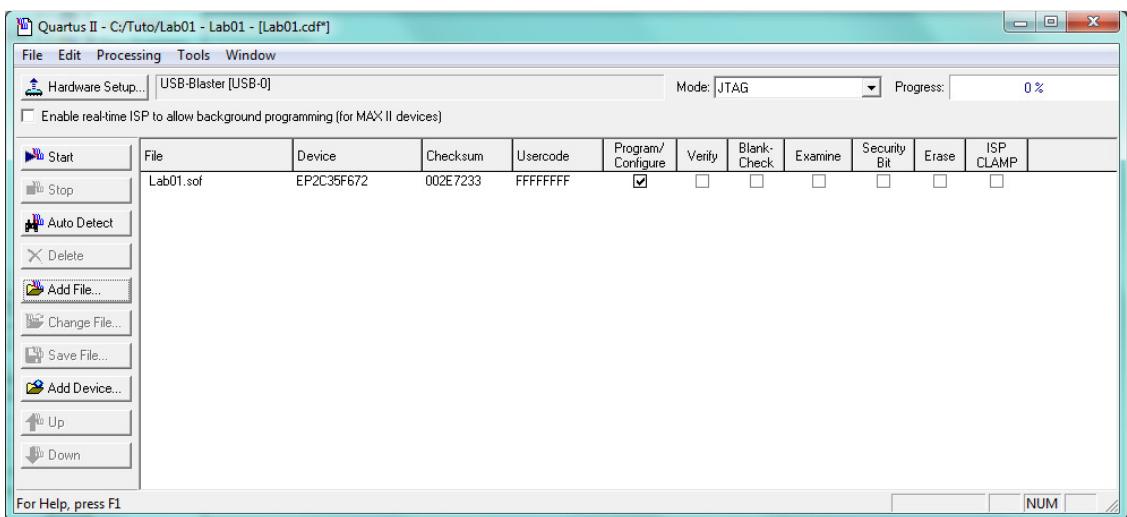

Fig. 11: Programmer Window

15. Once the program is running, Key [0] will act as reset button, while SW[17] will copy input from SW[7:0] to counter when high and start counting down when SW[17] is low. Counter counts up in decimal radix from ‘0’ up to ‘9’ and resets to ‘0’.

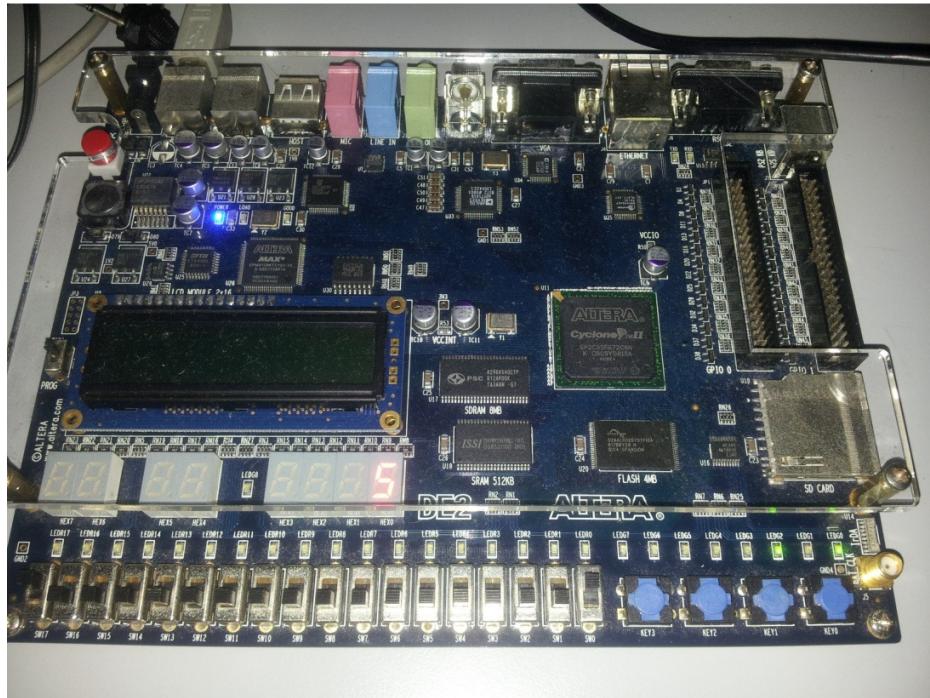

Fig. 12: Program Lab01 running on Altera DE2 FPGA Board

TD_HS	PIN_D5	TV Decoder H_SYNC
TD_VS	PIN_K9	TV Decoder V_SYNC
TD_RESET	PIN_C4	TV Decoder Reset
Signal Name	FPGA Pin No.	Description
VGA_R[0]	PIN_C8	VGA Red[0]
VGA_R[1]	PIN_F10	VGA Red[1]
VGA_R[2]	PIN_G10	VGA Red[2]
VGA_R[3]	PIN_D9	VGA Red[3]
VGA_R[4]	PIN_C9	VGA Red[4]
VGA_R[5]	PIN_A8	VGA Red[5]
VGA_R[6]	PIN_H11	VGA Red[6]
VGA_R[7]	PIN_H12	VGA Red[7]
VGA_R[8]	PIN_F11	VGA Red[8]
VGA_R[9]	PIN_E10	VGA Red[9]
VGA_G[0]	PIN_B9	VGA Green[0]
VGA_G[1]	PIN_A9	VGA Green[1]
VGA_G[2]	PIN_C10	VGA Green[2]

Altera DE2 Board Pin Table

VGA_G[3]	PIN_D10	VGA Green[3]
VGA_G[4]	PIN_B10	VGA Green[4]
VGA_G[5]	PIN_A10	VGA Green[5]
VGA_G[6]	PIN_G11	VGA Green[6]
VGA_G[7]	PIN_D11	VGA Green[7]
VGA_G[8]	PIN_E12	VGA Green[8]
VGA_G[9]	PIN_D12	VGA Green[9]
VGA_B[0]	PIN_J13	VGA Blue[0]
VGA_B[1]	PIN_J14	VGA Blue[1]
VGA_B[2]	PIN_F12	VGA Blue[2]
VGA_B[3]	PIN_G12	VGA Blue[3]
VGA_B[4]	PIN_J10	VGA Blue[4]
VGA_B[5]	PIN_J11	VGA Blue[5]
VGA_B[6]	PIN_C11	VGA Blue[6]
VGA_B[7]	PIN_B11	VGA Blue[7]
VGA_B[8]	PIN_C12	VGA Blue[8]
VGA_B[9]	PIN_B12	VGA Blue[9]
VGA_CLK	PIN_B8	VGA Clock
VGA_BLANK	PIN_D6	VGA BLANK
VGA_HS	PIN_A7	VGA H_SYNC
VGA_VS	PIN_D8	VGA V_SYNC
VGA_SYNC	PIN_B7	VGA SYNC
Signal Name	FPGA Pin No.	Description
AUD_ADCLRCK	PIN_C5	Audio CODEC ADC LR Clock
AUD_ADCDAT	PIN_B5	Audio CODEC ADC Data
AUD_DACLRCK	PIN_C6	Audio CODEC DAC LR Clock
AUD_DACDAT	PIN_A4	Audio CODEC DAC Data
AUD_XCK	PIN_A5	Audio CODEC Chip Clock
AUD_BCLK	PIN_B4	Audio CODEC Bit-Stream Clock
Signal Name	FPGA Pin No.	Description
ENET_DATA[0]	PIN_D17	DM9000A DATA[0]
ENET_DATA[1]	PIN_C17	DM9000A DATA[1]
ENET_DATA[2]	PIN_B18	DM9000A DATA[2]
ENET_DATA[3]	PIN_A18	DM9000A DATA[3]
ENET_DATA[4]	PIN_B17	DM9000A DATA[4]
ENET_DATA[5]	PIN_A17	DM9000A DATA[5]
ENET_DATA[6]	PIN_B16	DM9000A DATA[6]
ENET_DATA[7]	PIN_B15	DM9000A DATA[7]
ENET_DATA[8]	PIN_B20	DM9000A DATA[8]
ENET_DATA[9]	PIN_A20	DM9000A DATA[9]
ENET_DATA[10]	PIN_C19	DM9000A DATA[10]
ENET_DATA[11]	PIN_D19	DM9000A DATA[11]
ENET_DATA[12]	PIN_B19	DM9000A DATA[12]
ENET_DATA[13]	PIN_A19	DM9000A DATA[13]
ENET_DATA[14]	PIN_E18	DM9000A DATA[14]
ENET_DATA[15]	PIN_D18	DM9000A DATA[15]
ENET_CLK	PIN_B24	DM9000A Clock 25 MHz
ENET_CMD	PIN_A21	DM9000A Command/Data Select, 0 = Command, 1 = Data
ENET_CS_N	PIN_A23	DM9000A Chip Select
ENET_INT	PIN_B21	DM9000A Interrupt
ENET_RD_N	PIN_A22	DM9000A Read
ENET_WR_N	PIN_B22	DM9000A Write
ENET_RST_N	PIN_B23	DM9000A Reset
Signal Name	FPGA Pin No.	Description
GPIO_0[0]	PIN_D25	GPIO Connection 0[0]
GPIO_0[1]	PIN_J22	GPIO Connection 0[1]
GPIO_0[2]	PIN_E26	GPIO Connection 0[2]
GPIO_0[3]	PIN_E25	GPIO Connection 0[3]
GPIO_0[4]	PIN_F24	GPIO Connection 0[4]
GPIO_0[5]	PIN_F23	GPIO Connection 0[5]
GPIO_0[6]	PIN_J21	GPIO Connection 0[6]
GPIO_0[7]	PIN_J20	GPIO Connection 0[7]
GPIO_0[8]	PIN_F25	GPIO Connection 0[8]
GPIO_0[9]	PIN_F26	GPIO Connection 0[9]

Altera DE2 Board Pin Table

GPIO_0[10]	PIN_N18	GPIO Connection 0[10]
