▶ Old Stable Release: 4.0.13

▶ Older Stable Release: 3.6.21

▶ Documentation

Before You Begin

This release of Wireshark requires macOS 11.0 or later. If you are running an earlier version of macOS you can install using another packaging system such as Homebrew or MacPorts.

Quick Setup

To install Wireshark, drag the *Wireshark* application bundle to the *Applications* folder.

In order to be able to capture packets, install the Install ChmodBPF package.

If you would like to add the path to Wireshark, TShark, capinfos, editcap, and other command line utilities to the system PATH, install the Add Wireshark to the system path package.
